

NAME

kl – KL-11 or DL-11 asynchronous interface

DESCRIPTION

The discussion of terminal I/O given in *tty(IV)* applies to these devices.

Since they run at a constant speed, attempts to change the speed via *stty(II)* are ignored.

The on-line console terminal is interfaced using a KL-11 or DL-11. By appropriate switch settings during a reboot, UNIX will come up as a single-user system with I/O on the console terminal.

FILES

/dev/tty8console

SEE ALSO

tty(IV), *init(VIII)*

BUGS

Full modem control for the DL-11E is not implemented.
