

**NAME**

bio – biorhythm analysis

**SYNOPSIS**

**/usr/games/bio** birth-date start-date [ number-of-days ]

**DESCRIPTION**

*Bio* produces a graph of a person's biorhythm functions. The date arguments are given in the form mm/dd/yy. The *number-of-days* argument is the number of days for which the graph is printed. The default is 30 days. The three biorhythm curves are plotted: physical (p), emotional (e), and intellectual (i).

To get a neatly formatted graph quickly use:

bio birth-date start-date ^ reform ^ pr ^ gsi
