

NAME

`atoi` – convert ASCII to integer

SYNOPSIS

`atoi(nptr)`
`char *nptr;`

DESCRIPTION

Atoi converts the string pointed to by *nptr* to an integer. The string can contain leading blanks or tabs, an optional ‘-’, and then an unbroken string of digits. Conversion stops at the first non-digit.

SEE ALSO

`atof(III)`

BUGS

There is no provision for overflow.
