

NAME

times – get process times

SYNOPSIS

(times = 43.)

sys times; buffer

times(buffer)

struct tbuffer *buffer;

DESCRIPTION

Times returns time-accounting information for the current process and for the terminated child processes of the current process. All times are in 1/60 seconds.

After the call, the buffer will appear as follows:

```
struct tbuffer {  
    long    proc_user_time;  
    long    proc_system_time;  
    long    child_user_time;  
    long    child_system_time;  
};
```

The children times are the sum of the children's process times and their children's times.
