NAME

    getgid – get group identifications

SYNOPSIS

    (getgid = 47.)
    sys getgid

    getgid( )

DESCRIPTION

    Getgid returns a word (in r0), the low byte of which contains the real group ID of the current process. The
high byte contains the effective group ID of the current process. The real group ID identifies the group of the
person who is logged in, in contradistinction to the effective group ID, which determines his access
permission at the moment. It is thus useful to programs which operate using the ''set group ID'' mode, to find
out who invoked them.
