NAME

　　gtty – get terminal status

SYNOPSIS

　　(gtty = 32.)
　　(file descriptor in r0)
　　sys gtty; arg
　　arg: .=.+6

　　gtty(fildes, arg)
　　int arg[3];

DESCRIPTION

　　Gtty stores in the three words addressed by *arg* the status of the terminal whose file descriptor is given in r0 (resp. given as the first argument). The format is the same as that passed by *stty.*

SEE ALSO

　　stty(II)

DIAGNOSTICS

　　Error bit (c-bit) is set if the file descriptor does not refer to a terminal. From C, a −1 value is returned for an error, 0, for a successful call.
