NAME
>   sccsdiff – compare two versions of an SCCS file

SYNOPSIS
>   **sccsdiff** old-spec new-spec [pr-args] sccsfile ...

DESCRIPTION
>   *Sccsdiff* compares two versions of an SCCS file and generates the differences between the two versions. The *old-spec* is any valid *get*(I) specifier (e.g., —r1.1) for the old version to be gotten. Similarly, *new-spec* is any valid *get*(I) specifier (e.g., —r1.4) for the new version to be gotten. The *pr-args* are any valid *pr*(I) arguments which begin with a "—", except for "—h" (the output of *sccsdiff* is piped through *pr*(I)). Any number of SCCS files may be specified, but the *old-spec* and *new-spec* apply to all files.
>
>   *Sccsdiff* is a simple shell procedure; interested persons should "cat /usr/bin/sccsdiff" to discover how it works.

FILES
>   /tmp/get?????   temporary for old gotten version
>   /usr/bin/bdiff   program that generates differences
